

WELLCO

WELCO HISTORY

The Company presently known as Wellco Enterprises, Inc. began operations in 1941 under its original name, Wellco Shoe Corporation.

By way of background, the history of Wellco goes back to the nineteenth century when the grandfather of the founding partners started the family's first shoe factory in Germany. In the early 1930's, the German company developed the first practical method for molding and attaching a rubber sole to a shoe upper in a single vulcanizing operation. The German company had the foresight to patent this technology worldwide.

Early on, the principals of Wellco founded another company, known as Ro-Search Inc., which specialized in licensing the partners' patented technology to other manufacturers around the world and in manufacturing the specialized molds and presses required for the use of their processes. Ro-Search still survives today as a subsidiary of Wellco, which eventually changed its name to Wellco-Ro-Search Industries, Inc. A further name change took place in the early 1960's to the present designation, Wellco Enterprises, Inc.

When Wellco began manufacturing, it specialized in light-weight slippers and casual footwear with sponge rubber soles. Except for a brief time, during World War II when the use of rubber was restricted to defense purposes, Wellco continued to manufacture and market such footwear, trademarked Wellco Foamtreads, until approximately 1985.

In 1965, as a result of unsatisfactory performance of previous Army combat footwear in the jungles of Viet Nam, the Army adopted Wellco-Ro-Search technology for the manufacture of its hot-weather boots, and this product thus became known as the "Viet Nam Boot." Later the technology used to manufacture the Viet Nam Boot was adopted for all Army combat footwear. Wellco became a prominent supplier of such footwear to the US Military in 1965, and the remainder of the Army's needs were supplied for a number of years by three other companies, all of them using Ro-Search supplied molds and presses, as well as technical advice. To this day, the technology is used to manufacture military combat boots.

True to its heritage as a developer of footwear manufacturing technology, Wellco's subsidiary Ro-Search Inc., perfected and patented in 1957 a new technique for molding and attaching a rubber sole to a welted upper. This was known as "Process 82," to indicate that it was considered to be twenty five years ahead of its time.

Through the years, Wellco and Ro-Search have participated in numerous further developments of combat footwear for the US Military. For instance, a desert boot was developed and adopted in 1991 to include features and improvements specified by General Schwarzkopf for Operation Desert Storm. The present generation of combat boots, with a direct-molded rubber base sole, a polyurethane midsole and a rugged high-traction rubber tread sole can be traced to a development contract awarded to Ro-Search in 1995 by US Army Natick Laboratories. Similarly, the first military blast-protective boots and overboots were developed and produced by Wellco and Ro-Search.

Today Wellco continues to be innovative in footwear and continue its excellence in quality, comfort, and design. In the battlefield, nowhere is performance more critical. And when it comes to footwear, no company knows this better than Wellco. From the jungles of Vietnam to the mountains of Afghanistan, our boots have left their prints in the world's most hostile conditions. As our best and bravest return home, we are guided by one simple directive: There and Back. Translated this means delivering the same advanced footwear solutions our warriors have come to trust no matter where the fight takes them—be it a rocky bluff in the Hindu Kush or a dark alley in the inner city.

TECHNICAL SPECIFICATIONS/ICON GUIDE

The ARCLITE FR SOLING SYSTEM is the latest in new technologies provided to the category by Wellco. This soling system is the ONLY TRUE FLAME RESISTANT soling system provided in Military Footwear. Not only is safety increased with the ARCLITE FR SOLING SYSTEM, comfort and durability is drastically increased as well. This particular soling system can perform at the highest levels in a temperature range of - 40° C to + 300° C.

The Wellco SIGNATURE ELITE INSOLE is a new product for 2010, and will be included in all Wellco commercial products. The SIGNATURE ELITE INSOLE is made of a premium polyurethane provide a cushion unlike any other insole on the market. The SIGNATURE ELITE INSOLE provides a superior comfort to your feet. It is built for strenuous all-day activities whether it is patrolling, training, or a demanding

TUFFkushion® is a midsole system developed by Wellco. This is a feature on majority of present generation military boots. This process is a polyurethane midsole with a high traction rubber tread sole. This can all be traced to a development contract awarded to Wellco by US Army Natick Laboratories. Wellco's TUFFkushion® soling system not only provides a lightweight product, but also provides a running shoe feel.

At Wellco, we have extremely flexible capabilities. Having our own US factories allows us to provide special make-up products with a fast turnaround time. Throughout the 2010 product offering you will notice several products with a SPECIAL ORDER tag. This tag indicates that the product is available to order if a minimum quantity of 500 is purchased. There are no cancellations on SPECIAL ORDERS.

Throughout the years, Wellco has been the leader in technology and innovation in the Military Footwear category. Wellco is taking everything a step further in 2010. With the addition of new technologies provided to the category by Wellco, this allows us to continue to stay on top as the leader in Military Footwear technology and innovation. Wellco, is adding cutting edge fabrics to the line as well to provide comfort, quality, along with function.

TECHNICAL SPECIFICATIONS/ICON GUIDE

HOT WEATHER - Products with the HOT WEATHER icon are products for warm conditions/climates and seasons.

EXTREME COLD WEATHER - Products with the EXTREME COLD WEATHER ICON are insulated products for the harshest winter weather climates.

WATERPROOF - Products with the WATERPROOF icon are products for wet conditions/climates and seasons, which keep your feet dry.

MOISTURE WICKING - Products with the MOISTURE WICKING icon are products for hot conditions, which will keep you feet cool and dry.

FLAME RESISTANT - Products with the FLAME RESISTANT icon are products for harsh and risky fire environments.

ANTIMICROBIAL - Products with the ANTIMICROBIAL icon are products with a treatment with an odor inhibiting process or product.

COMPOSITE TOE - Products with the COMPOSITE TOE icon are products which will protect your feet. All models meets ASTM F2412-05 and F2413-05 Standards.

STEEL TOE - Products with the STEEL TOE icon are products which will protect your feet. All models meets ASTM F2412-05 and F2413-05 Standards.

SIDE ZIPPER - Products with the SIDE ZIPPER icon are products which will supply convenience for donning and doffing.

PUNCTURE/SPIKE RESISTANT - Products with this icon are products which will prevent objects from entering at the sole of the footwear.

EH RATED - Products with the EH RATED icon are products which will protect your feet in an electrical hazard condition,

SLIP & OIL RESISTANT - Products with the SLIP & OIL RESISTANT icon are products which will supply safety in slick and oily conditions.

OUTSOLE GUIDE & SPECIFICATIONS

WELCO ArcLite FR SIGNATURE - The ARCLITE FR outsole is the ONLY TRUE FLAME RESISTANT soling system provided in Military Footwear. Not only is safety increased with the ARCLITE FR SOLING SYSTEM, comfort and durability is drastically increased as well. This particular soling system can perform at the highest levels in a temperature range of - 40° C to + 300° C.

WELCO ArcLite FR LIGHTNING - The ARCLITE FR LIGHTNING outsole is the ONLY TRUE FLAME RESISTANT soling system provided in Military Footwear. Not only is safety increased with the ARCLITE FR SOLING SYSTEM, comfort and durability is drastically increased as well. This particular soling system can perform at the highest levels in a temperature range of - 40° C to + 300° C.

WELCO SIGNATURE NON MELTING DD PU - The NON MELTING DUAL DENSITY PU outsole is an extreme light-weight outsole which provides excellent cushion. The slip & oil resistant outsole also withstands extreme heat and will not melt in extremely hot conditions.

WELCO SNIPER - The SNIPER outsole is a slip & oil resistant outsole made of rubber. The SNIPER outsole is extremely lightweight and has a wide lug system to provide stealth abilities when moving through areas with debris.

WELCO TRAIL - The TRAIL outsole is ideal for both work and outdoor conditions. Being slip & oil resistant as well as having a tread pattern designed for the world of outdoors, allows for the TRAIL outsole to be used for numerous activities.

WELCO PANAMA - The PANAMA outsole is an original Wellco creation. It was created for the jungles of Vietnam, and is being used in several other locations throughout the world. It is slip & oil resistant outsole made of

WELCO V-TRAX® - The WELCO V-TRAX® outsole is another slip & oil resistant outsole developed and constructed by Wellco. It was created to provide more cushion and comfort, along with providing a lighter weight to the soldier on duty.

WELCO RESISTOR - The RESISTOR outsole provides excellent protection against animal fats, chemicals, abrasions, and oils & greases. Using an extreme slip & oil resistant made of lightweight non-tracking rubber, extra safety in a slippery environment is provided.

OUTSOLE GUIDE & SPECIFICATIONS

WELLCO MINE BOGGLER - The MINE BOGGLER outsole is specifically for mine infested locations. It has an Attenuator system to send blasts outward from the foot to provide significant protection. The outsole also has high flexibility and is slip & oil resistant

WELLCO PURSUIT - The PURSUIT outsole is provided on the X-4ORCE tactical boot. Along with being slip & oil resistant, It has sharp angles that allow you to rip through trenches and enable you to grip majority of the surfaces throughout the world.

WELLCO NITRILE RIPPLE - The NITRILE RIPPLE outsole is a slip & oils resistant outsole that provides excellent all-day cushion and comfort when patrolling on hard and rough surfaces

VIBRAM® NEW BIFIDA - The VIBRAM® NEW BIFIDA outsole is the perfect solution for the mountains of Afghanistan. With the Fire & Ice compound, this particular outsole will stay flexible in extreme cold weather conditions while keeping its stability in extreme hot weather conditions

VIBRAM® 1307 CHEVRON - The VIBRAM® CHEVRON outsole is a slip and oil resistant outsole with self cleaning channels. This outsole is ideal for flight decks and level grounds, including ladders.

WELLCO LOW DUROMETER “STICKY” - The LOW DUROMETER “STICKY” outsole is puncture/spike resistant along with being efficient in several environments. It is slip & oil resistant with a set of small cleats to provide high traction in multiple environments.

VIBRAM® 1321 - At that base of the VIBRAM® 1321 sole is Vibram's 360 Force. Specifically created for Wellco, its lugs have a distinct shape that provides traction and secure braking in all directions. Made with Vibram's Fire & Ice Compound, the sole helps Wellco make a boot ready for a range of climates.

VIBRAM® 1276 - The VIBRAM® 1276 outsole has specific lug placements allowing maximum traction in various terrains throughout the world. This extremely stable outsole is slip & oil resistant and performs at high levels in cold and wet conditions.

GEN II HOT WEATHER JUNGLE**STYLE NO: T110****STYLE NO: B110**

Since 1965 Wellco has been manufacturing the Jungle boot. The boot has now evolved into the GEN II HOT WEATHER JUNGLE boot. The evolution of this boot has progressed into a lighter, faster, and more breathable boot. The GEN II HOT WEATHER JUNGLE boot features a smooth neoprene tongue for added comfort, a heel stabilizer for added stability and function, as well as a custom drain vent for extra draining and breathability. The modern GEN II JUNGLE boot is engineered to be the lightest combat boot in the market

RESISTOR PT

STYLE NO: 219

The RESISTOR boot is a sharply designed boot built for messy situations. With sturdy lower quarters, barnyard chemicals are easily cleaned. The RESISTOR also provides excellent protection against animal fats, chemicals, abrasions, and oils & greases. The outsole is equally qualified as the upper. Using an extreme slip & oil resistant outsole made of lightweight non-tracking rubber, extra safety in a slippery environment is provided. Not only have we focused on the outer shell of the boot, but we have also included a full cushioned insole.

FULL SIZES: 4 - 14 REG, WIDE
